                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 10, A

The scissile amide group is replaced with H or a substituted Carbon moiety effectively inhibiting the activity of peptidases such as elastase, plasmin thrombin, urokinase etc.
                                                                                                                                                                                    Gaps
N2-NH- derived from an aromatic amine, eg P-nitro-aniline, alphadaunorubbichion or filoroguine, or it is a gp. which may confer activity, eh H, OH, CH2CLI. When X is the residue of a drug, the cpd. is a prodrug in which the peptide is the substrate for a specific procease secreted by the target cell for the active drug, eg tumour cells or microorganism pathogens, eg Plasmodium falciparum. Due to the polyhydroxy gp., the cpds. are very soluble in water or buffer soln. and are able to bu used at high concon. The cpds. also allow the detection of proteases and peptidases and allow easy determination of the best substrate for a particular
                                                                                                                                                                                                                                                                                                                                                                            Elastase; plasminogen activator; cathepsin; calpain; enkephalinase;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This peptide is the RI gp. of the cpd. of formula: RINHCH(R2)-COCF2CF3. This cpd. is a peptidase substrate analogue and is a specific enzyme inhibitor for a range of proteases, e.g. serine., carboxilic acid., and metallo-proteases. It is useful in the treatment of rheumatoid arthritis, thrombosis and psoriasis and is also used as a male contraceptive. See also AAR10876-83, AAR10886
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel serine-, carboxylic acid-and metallo-proteinase-inhibitors - inhibit range of proteinase(s) in treating rheumatoid arthritis, thrombosis and psoriasis, also is a male contraceptive

                                                                                                                                                                                                                                           This peptide is a specific example of a highly generic protease inhibitor useful for medical purposes. The peptide analogues include inhibitors of urokinase, remin, cathepsin D, etc. which can be used as anti-proliferative agents and abortifacients, hypotensives, antiinflammatory and antidemyelinating agents, respectively. This sequence is an example of a highly generic formula.

Inhibitors of cathepsin G and elastase for preventing connective inhibitors of cathepsin G and elastase for preventing connective tissue degradation are chemically linked inhibitors of the proteases clastase (pref. the peptide of AAR29963, or Lys(2021-pro-Val or Val-pro-Val) and cathepsin G (pref. the peptide of AAR2964, or Val-pro-Phe or Phe).

The N-terminal amino acids of the peptides of AAR2963-64 are pref. Inted by -C(O)-phenylene G(O)-, esp. wherein the phenylene is a para-phenylene gp.

The cpds. have an anti-inflammatory effect useful in the treatment of gout, rhumaroid arthritis and other inflammatory diseases and to prevent elastin mediated tissue damage. They can also be used in the treatment of emphysema and adult respiratory distress syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The sequences given in AAR38410-11 are cathepsin G inhibiting peptides which were produced by standard peptide synthesis methods. In the context of the invention one of these peptides may be linked via their N-termini to an elastase inhibiting peptide (see features table). The peptide conjugates may be used to prevent neutrophilmediated connective tissue degradation associated with inflammatory diseases eg. gout and rheumatoid arthritis. They may also be used for preventing elastin-mediated tissue damage in the treatment of emphysema and adult respiratory distress syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5-(N-succinyl-alanyl-alanyl-prolyl-phenylalanyl)aminonaphthalene-1-(N-propyl)sulphamide (Claim 1) and 5-(N-benzyloxycarbonyl-alanyl-alanyl-yptonyl-phenylalanylylaminonaphthalene-1-(N-propyl)sulphamide (Claim 2) are prepared by initially reacting N-benzyloxycarbonyl-phenylalanine with isobutyl chloroformate in tetrahydrofuran
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Prepn. of new succinyl-alanyl-alanyl-propyl-phenylalanyl-amino-naphthalen-propyl-sulphamide - for use as ansa-substrate in the quantitative determn. of chymotrypsin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note= "Suc-Ala (Claim 1) or 2-Ala (Claim 2)"

                                                                                                                                                                                                                               The peptide is a chromogenic substrate for use in a peptidase assay to test the peptidase activity of a novel alkaline protease. Detergent was found to interfere with the assay by reducing the protease activity. See also AAR3459-61 and AAR34463-66.

It may be used in a formulation as a soap, lotion, cream, spray, etc. to stop parasitic penetration of the skin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic tetra:peptide(s) with an N-terminal blocking gp. and C-terminal enzyme inhibitor - can be formulated into soaps and sprays and used to prevent schistosomal skin penetration
                                                                                          Prevention; schistosomiasis; parasite; infection; prevention; parasitic penetration; skin; cercariae; anti-penetrant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence of internal fragment of a chromogenic substrate for cathepsin G.

To measure the activity of E. coli PPlase-alpha (peptidyl prolyl c trans isomerase alpha), the PPlase and CsA (cyclosporine A) are added in the cell and mixed for 1 minute. Then, this peptide is added and incubated, and chymotrypsin added to start the reaction. The effect of CSA on the inhibition of the PPlase activity can be detected by varying the amt. of the CsA added. The inventors are claiming a PPlase-beta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Escherichia coli, protein conformation, folding, acceleration, PPIase-alpha, peptidyl prolyl cia trans isomerase alpha, catalysis, isomerisation, prolyl peptide bond.

                                                                                                                                                                                                                                                                                                                                                                                                                                               Protease inhibitory profiles of the Kunitz inhibitors were determined for a variety of proteases using a variety of conceases using a variety of chromogenic substrates and compared to the inhibitory activity shown by the Kunitz-type inhibitor domain of the amyloid protein precursor and bovine aprotinin. The substrate AAR53780 was tested using the protease leukocyte elastase.

                                                                                                                                                                                                                          Gaps
                                                                                 To measure the activity of E. coli PPIase-alpha (peptidy) prolyl cistrans isomerase alpha), the PPIase and C8A (cyclosporine A) are added in the cell and mixed for 1 minute. Then, this peptide is added and incubated, and chymotrypsin added to start the reaction. The effect of C8A on the inhibition of the PPIase activity can be detected by varying the amt. of the C8A added. The inventors are claiming the PPIase-alpha.

An antibody raised against the enzyme can be used to diagnose the presence and progress of a periodontal disease, caused by a pathogenic microbe.
                                                                                                                                                                                                                          ;

The protein was seen to selectively hydrolyse synthetic substrates having an aromatic amino acid at the creminal. The response to the peptide given in AAR7196 was particularly high. The cell growth-stimulating protein has a mol. wt. of 420 4/- 40 kb and a single subunit mol. wt. of 130 4/- 20 kb. than isolelectric point of 4.8 and has call growth stimulating activity. Its enzymatic activity decreases in the presence of a serine protease inhibitor, increase in the presence of various metal ions, and is stabilised in the presence of various metal ions, and is stabilised in the presence of calcium ion. The protein is partucluarly useful for the treatment of wounds, gastric and leg ulcers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 5
OSBOBA
Cytochrome-c oxidase (EC 1.9.3.1) chain VIIC precursor [validated] - bovine
NyAlternate names: cytochrome-c oxidase chain VIIIa
C;Species: Bos primigenius tautus (cattle)
C;Species: Bos primigenius tautus (cattle)
C;Date: 31-May-1979 #sequence revision 31-Dec-1992 #text_change 15-Sep-2000
C;Accession: JH0473; S06597; Ā00498; H29968; S18834
C;Accession: JH0473; S06597; Ā00498; H29968; S18834
A;Attle: Characterization and expression of a cDNA specifying subunit VIIc of bovine cyt
A;Reference number: JH0473; MUID:92009215; PMID:1655579

DNA Seq. 12:131-135(2001).

-!- FUNCTION: CGRP induces vasodilatation. It dilates a variety of vessels including the coronary, cerebral and systemic vasculature. Its abundance in the CNS also points toward a neurotransmitter or neuromodulator rote (By similarity).

-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO THE CALCITONIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rattus norvegicus (Rat).

                                          Price N.C.;
"Solution structures of calcitonin-gene-related-peptide analogues of
"Solution structures of calcitonin-gene-related peptide and amylin.";
Biochem. J. 275:788.1991).
-!- FUNCTION: CGRP induces vasodilatation. It dilates a variety of
vessels including the coronary, cerebral and systemic vasculature.
Its abundance in the CNS also points roward a neurotransmitter or
neuromodulator role. It also elevates platelet cAMP.
-!- ALTERNATIVE PRODUCTS: 3 ISOPORMS; I (AC P01258), 2 (AC P01258) AND
-!- SIMILARITY: BELONGS TO THE CALCITONIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PROSITE; PS00258; CALCITONIN; 1.
